Website Problem Audit

Target: https://www.petexxindia.com/ (Petexx India / Petexx Hosiery India Pvt Ltd, Tiruppur)
Audit date: 22 October 2026 · **Scope:** Full public site (5 pages), HTTP headers, TLS, sitemaps, robots.txt, outbound links, cross-referenced directory data
Method: Live server-side fetches, header/TLS inspection, DOM/regex analysis, link-status probes

OVERALL GRADE: D+ — COMPROMISED & STALE

4	7	9	7	27
CRITICAL	HIGH	MEDIUM	LOW	TOTAL ISSUES

1. CRITICAL — Fix Immediately

Hidden spam link injection (site compromised)

CRITICAL CRIT-01

LOCATION

`https://www.petexxindia.com/about-us/` — inside the company description paragraph.

EVIDENCE

```
<a style="text-decoration: none; color: #333;" href="https://bestessayes.com/buy-research-papers/">se
ll term papers</a>
```

PROBLEM

An invisible link (unstyled anchor text, matching text color, no underline) points to an essay-mill spam domain. Classic black-hat SEO injection delivered via an abandoned nulled theme or vulnerable plugin. Google treats manipulative outbound links as a webspam signal and can apply manual action or deindex the domain.

Fix: Remove the link, scan all `wp-content` files for further injections, rotate all admin credentials, replace the theme, install a firewall/monitoring plugin (Wordfence/Sucuri) and request Google reconsideration if a manual action exists in Search Console.

HTTP version serves full content — no redirect to HTTPS

CRITICAL CRIT-02

LOCATION

Site-wide, server configuration.

EVIDENCE

```
GET http://www.petexxindia.com/  →  HTTP/1.1 200 OK   (no 301 to https://)
```

PROBLEM

The insecure HTTP URL returns the complete page instead of a 301 redirect. Users can browse unencrypted; search engines may index both protocol variants (duplicate content, split ranking signals); forms and emails are exposed to interception.

Fix: Add a permanent 301 redirect HTTP→HTTPS at the Apache/vhost level, then force HTTPS for all hosts (www and non-www canonicalised to one).

60+ mixed-content resources loaded over plain HTTP

CRITICAL CRIT-03

LOCATION

Every template.

EVIDENCE

```
Homepage:   47 × src="http://..."   3 × href="http://..."
Products:    7 × src="http://..."
Portfolio:   8 × src="http://..."
3rd-party:  http://kloe.select-themes.com/wp-content/uploads/2015/12/pattern.png
```

PROBLEM

On an HTTPS page browsers block or warn on insecure subresources — broken images, insecure-connection warnings in the address bar, loss of buyer trust (the audience here is overseas importers). Assets still point at the theme vendor's demo domain over HTTP: if that domain dies or changes hands, parts of the site break.

Fix: Run a search-replace of `http://www.petexxindia.com → https://` across post content, and download all `kloe.select-themes.com` assets locally into the child theme. Enable "HTTPS mixed-content" scanning after.

All security headers missing

CRITICAL CRIT-04

EVIDENCE

```
Strict-Transport-Security : (missing)
Content-Security-Policy   : (missing)
X-Frame-Options           : (missing)
X-Content-Type-Options    : (missing)
Referrer-Policy           : (missing)
```

PROBLEM

No HSTS → HTTPS can be silently downgraded on first visit. No CSP → the already-present injected script/link can execute unchallenged. No X-Frame-Options → clickjacking risk. No X-Content-Type-Options → MIME-sniffing risk.

Fix: Add the five headers in `.htaccess` (HSTS with 1-year max-age + includeSubDomains once HTTPS redirect is in place; CSP starting in Report-Only mode).

2. HIGH — SEO & Indexation Damage

No meta descriptions on any page

HIGH HIGH-01

EVIDENCE

```
Homepage : <meta name="description"> → (absent)
Portfolio: <meta name="description"> → (absent)
```

Google auto-generates snippets from unrelated page text → poor click-through rate for commercial queries like "apparel sourcing India".

Fix: Write unique 140–160 char descriptions for all 5 main pages and key portfolio items.

Keyword-less title tag site-wide

HIGH HIGH-02

EVIDENCE

```
<title>Petexxindia</title>                          (homepage)
<title>Men’s T-Shirts 1 – Petexxindia</title>   (portfolio)
```

No brand descriptor, no keywords, no location. Invisible in search results for the terms that matter (sourcing, garments, exporter, Tiruppur).

Fix: Pattern: `Page — Petexx India | Apparel Sourcing & Garment Export from Tiruppur`.

No H1 heading on any tested page

HIGH HIGH-03

EVIDENCE

```
Homepage H1 count: 0
Contact  H1 count: 0   (all headings are H2/H3)
```

Broken semantic hierarchy; search engines get no primary topic signal.

Fix: Exactly one keyword-bearing H1 per page.

Zero social-preview and structured-data tags

HIGH HIGH-04

EVIDENCE

```
Open Graph (og:*) tags : 0
Twitter Card tags      : 0
JSON-LD schema         : 0
```

Sharing petexxindia.com on LinkedIn/Facebook/WhatsApp produces no image, title or description — fatal for a B2B company pitching buyers socially. No Organization/LocalBusiness schema → no rich results, no knowledge-panel feeding.

Fix: Add OG + Twitter tags and a JSON-LD `Organization` block (name, address Tiruppur 641604, emails, phone, sameAs social links).

Author/user sitemap publicly exposed

HIGH HIGH-05

EVIDENCE

```
GET /wp-sitemap-users-1.xml → 200 OK
<loc>https://www.petexxindia.com/author/petexx/</loc>
```

Leaks the WordPress username `petexx` — feeds credential-stuffing / brute-force attacks.

Fix: Disable author archives/sitemaps (or `Disallow: /author/` + remove from sitemap index) and rename the admin user.

WordPress version disclosed to the public

HIGH HIGH-06

EVIDENCE

```
<meta name="generator" content="WordPress 7.0.7">
```

Exact core version fingerprint for exploit targeting; combined with neglected plugins/theme this is how infections (like CRIT-01) get in.

Fix: Strip the generator meta; keep core auto-updated; audit plugin list (contact-form-7, js_composer, soundy-background-music, kloe theme).

robots.txt under-configured

HIGH HIGH-07

EVIDENCE

```
User-agent: *
Disallow: /wp-admin/
Allow: /wp-admin/admin-ajax.php
Sitemap: https://www.petexxindia.com/wp-sitemap.xml
```

Author archives, feed endpoints and debug paths are all crawlable; nothing prevents indexing of the spam-injected page variants.

Fix: Add `Disallow: /author/`, `/feed/`, `?*` query traps as appropriate after fixing CRIT-01.

3. MEDIUM — Trust, Compliance & Performance

Site content frozen in 2016

MEDIUM MED-01

EVIDENCE

```
Footer on every page : "2016 Petexx India © All Rights Reserved"
Portfolio assets     : 2016/…, 2015/… uploads
Shortcode remnant    : [analytics-counter] (non-functional)
```

A buyer landing in 2026 sees a decade-stale site — direct hit to credibility for a company claiming active EU/US brand work.

Fix: Full content refresh: current year, new photography, real case studies, updated team & capacity claims.

No web analytics installed

MEDIUM MED-02

EVIDENCE

```
google-analytics / gtag / GTM / UA- / G-XXXX / fbq() references in source: 0
Footer still renders dead [analytics-counter] shortcode
```

Zero visibility into traffic, buyer sources or conversions; every marketing decision is guesswork.

Fix: Install GA4 (or privacy-friendly alternative) + Meta Pixel if ads are run; remove the dead shortcode.

Personal emails exposed in plain text

MEDIUM MED-03

EVIDENCE

```
Contact page: amit@petexxindia.com, sumit@petexxindia.com, +91-9443166073
(MCA-registered email amit@petexxindia.com also public via ZaubaCorp)
```

Harvested by spam bots; directors' mailboxes get flooded; spear-phishing surface.

Fix: Obfuscate or route via the contact form; add DMARC/SPF/DKIM records for the domain.

Google Maps widget broken (raw shortcode output)

MEDIUM MED-04

EVIDENCE

```
Contact page renders literal text:  [vc_gmaps size="300"]
```

Visual Composer map widget no longer resolves — the office location renders as code. Overseas buyers cannot see where the company is.

Fix: Re-insert the Google Maps embed (iframe) manually or update/replace js_composer.

Accessibility violations

MEDIUM MED-05

EVIDENCE

```
viewport: user-scalable=no          → zoom disabled (WCAG 1.4.4 fail)
Soundy Background Music plugin active (8 refs) → autoplay audio (WCAG 2.2.2 fail)
ARIA/role attributes sitewide: 2
```

Users with low vision cannot zoom; autoplaying music is hostile UX in a B2B context; legal exposure under accessibility norms in EU target markets.

Fix: Remove `user-scalable=no`, deactivate the music plugin, add alt text discipline + landmark roles.

Asset bloat & layout instability

MEDIUM MED-06

EVIDENCE

```
Homepage: 18 CSS files + 25 JS files (for a 5-page brochure site)
48 images — only 1 with loading="lazy", only 5 with width/height attributes
37 defer/async markers but 43 render-blocking assets total
```

Slow mobile rendering, high Core Web Vitals failure risk (CLS, LCP) → weaker rankings and abandoned buyer sessions.

Fix: Dequeue unused CSS/JS, lazy-load all below-fold images, set intrinsic dimensions, add caching.

4 of 5 partner-factory links are dead

MEDIUM MED-07

EVIDENCE

```
http://www.cliftonexport.com/                    → 404
http://exceldeals.com/                           → 403
http://www.sudhamahosieries.com/sudhama_hosieries…  → DNS does not resolve
http://tea-india.org/majesticexports             → timeout (dead)
http://bestcorp.in/profile.html                  → 200 OK  (only survivor)
```

The "Mfg Facilities" page is the core proof of the "20+ factories" claim — 80% of its outbound evidence links fail, making the whole network claim unverifiable.

Fix: Verify each partner, remove dead entries or update URLs; state audited compliance certificates per factory.

Third-party theme-demo domain in production (nulled-theme symptom)

MEDIUM MED-08

EVIDENCE

```
External domains loaded: http://kloe.select-themes.com (demo CDN), http://gmpg.org
Plugins found: contact-form-7, js_composer, soundy-background-music, theme "kloe"
```

Production assets served from a third-party demo server over HTTP — supply-chain risk (domain takeover = site defacement) and a hallmark of an unlicensed theme that never receives security updates.

Fix: Purchase/replace the theme, host all assets locally on the same domain.

SSL certificate renewal window

MEDIUM MED-09

EVIDENCE

```
Issuer: Let's Encrypt (CN=YR2)
Valid: 2026-09-23 → 2026-12-22   (60 days remaining at audit date)
```

Certificate is valid today, but on this site's maintenance track record an unmonitored auto-renewal failure = full HTTPS outage.

Fix: Confirm certbot/cron auto-renewal is active and monitored; add an uptime check.

4. LOW — Content, Accuracy & Consistency

~50 thin portfolio pages (index bloat)

LOW LOW-01

EVIDENCE

```
/products/ gallery: image-only items ("Men's T-Shirts 1..8", "Nightwear 1..8", "Yoga 1..8", "Sweaters
1..8", "Infant Wear 1..8", "Ladies tops 1..8" …)
No product descriptions, MOQ, fabric specs, prices, or lead times.
```

Search engines classify as thin/duplicate content; buyers get zero decision-making information.

Fix: Consolidate galleries into category pages with real copy, specs and enquiry CTAs.

Embarrassing copy errors on live pages

LOW LOW-02

EVIDENCE

```
"They are given the freedom to take take ownership…"      (doubled word, homepage)
"our concern follows the AQL 2.5 level"                     (wrong word, homepage)
"Importers; Wholesalers and Fashion retailers"              (semicolons used as commas, throughout)
+ injected spam anchor "sell term papers"                    (see CRIT-01)
```

Signals neglect to exactly the audience (EU/US importers) whose business depends on detail-orientation.

Fix: Professional copy-edit of all 5 pages.

Unverified famous-brand logo wall (trademark risk)

LOW LOW-03

EVIDENCE

```
Logos displayed as clients: Pepe Jeans, Mango, Ralph Lauren, C&A, Fila,
Mothercare, Hanes, Tom Tailor, Prana, Max, Seiyu + others —
no "manufactured for" disclaimer, no permission shown, no case studies.
```

Displaying third-party trademarks without authorisation risks legal notice and, if untrue, misrepresentation. Unverifiable claims also read as inflated.

Fix: Keep only clients whose permission is documented; add a neutral "selected brands produced by our partner factories" disclaimer with dates.

Founding year stated four different ways

LOW LOW-04

EVIDENCE

```
Website About page & Tracxn & Kompass : 1991
LinkedIn company page                 : 2003
TradeIndia profile                    : 2004
MCA incorporation (legal truth)       : 16 Sep 2009 — Petexx Hosiery India Pvt Ltd,
                                        CIN U18101TZ2009PTC015492
Apparel Resources press, Jun 2016     : "completing 1½ decades" (≈2001)
```

The company's own story is internally inconsistent — easy for a checking buyer to catch, hard to explain.

Fix: Pick one defensible narrative (e.g. "founded 2001, incorporated as Petexx Hosiery India Pvt Ltd in 2009") and align every property.

Contact form has no visible spam protection

LOW LOW-05

EVIDENCE

```
Plugin: Contact Form 7 — no honeypot, no reCAPTCHA markers detected in markup
```

Form will be bot-spammed once anyone finds it; genuine enquiries buried.

Fix: Add Cloudflare Turnstile or reCAPTCHA to CF7, plus form-to-email logging.

Broken links & dead interactive elements

LOW LOW-06

EVIDENCE

```
Sweaters 2 links to wrong slug: /portfolio-item/sweatshirts-2-2/
Homepage slider/nav contains empty href="#" anchors
Footer "Online Order Tracking" → links to /services/ (no tracking system reachable,
 despite Services page advertising a "Web Based ONLINE ORDER TRACKING SYSTEM")
```

Advertised functionality doesn't exist; navigational dead-ends frustrate buyers.

Fix: Correct slugs, remove empty anchors, either build the order-tracking login or remove the promise.

Contradictory contact details across directories

LOW LOW-07

EVIDENCE

```
Website          : +91-9443166073 (Amit / Sumit emails)
ZoomInfo         : +91 421 430 4040
TradeIndia       : MD "Mr. Sumit Prasad"; Purchase Mgr "Mr. Ragavan"
IndiaMART        : "Sumit Kumar Prasad (General Manager Marketing)"
LinkedIn         : "established 2003"; Kompass: "50-99 employees" vs Tracxn: 13
```

No single source of truth; buyers get different numbers, titles and company ages depending where they look.

Fix: Standardise NAP (name, address, phone) + founding year across site, LinkedIn, IndiaMART, TradeIndia, Kompass, GlobalLinker.

5. Priority Fix Order

#	Action	Effort	Issues closed
1	Remove spam link, full malware/IOC scan, rotate credentials, replace theme	~1 hr	CRIT-01, HIGH-06, MED-08
2	Force HTTPS 301 + add 5 security headers	~30 min	CRIT-02, CRIT-04
3	Search-replace all mixed-content URLs; localise theme assets	~1 hr	CRIT-03
4	Rewrite titles + meta descriptions + one H1 per page	~2 hrs	HIGH-01…03
5	Add OG/Twitter tags + JSON-LD Organization schema	~2 hrs	HIGH-04
6	Block author sitemap, strip generator tag, harden robots.txt	~15 min	HIGH-05…07
7	Remove music plugin + user-scalable=no; fix map embed; install GA4	~1.5 hrs	MED-02, MED-04, MED-05
8	Fix/remove dead factory links; add compliance certificates per factory	~2 hrs	MED-07
9	Full content refresh + copy edit + consolidate portfolio	Days	MED-01, LOW-01…03, LOW-06
10	Reconcile founding year, phone, titles across all properties	~1 hr	LOW-04, LOW-07
11	CF7 captcha, email obfuscation, DMARC, cert-renewal monitoring	~1 hr	MED-03, MED-09, LOW-05

Not covered by this audit (out of scope): server-side vulnerability scanning, authenticated admin-panel review, paid-tool Lighthouse/PageSpeed CI, Google Search Console / manual-action status, backend order-tracking system internals, factory compliance certificate authenticity.

Positive findings for balance: TLS 1.3 + AES-256 · valid Let's Encrypt cert · canonical HTTPS tag present · WordPress core current (7.0.7) · robots.txt + sitemap functional · ~500–600 ms server response · legally Active MCA-registered Pvt Ltd (CIN U18101TZ2009PTC015492) — the business is real; the website is the liability.

Generated by automated + manual audit, 22 October 2026. Evidence reflects live fetches on audit date.
